**COUNTRIES OF WORK EXPERIENCE**

Argentina, Barbados, Brazil, Costa Rica, Ecuador, Honduras, Mexico, Peru and Uruguay

## CONSULTANCY: IMPACT EVALUATION

### **Impact Evaluation of the “Global Credit Program for the Reactivation of the Productive Sector” (program IADB-AR-L1328), April 2021 - present**

The consultancy has four components: the first component of the consultancy (“Component A”) corresponds to the design of the impact evaluation of the “Global Credit Program for the Reactivation of the Productive Sector” (operation AR-L1328), using methodologies that allow arguing causal attribution between the intervention and the impacts defined as of interest. The second component (“Component B”) consists of the identification and design of analytical indicators and other reports without causal attribution. The third component (“Component C”) consists in implementing the impact evaluation and the design of the analytical indicators of components A and B. Finally the fourth component (“Component D”) consists in giving advice and generation of management and formulation capacities in the SEPyme counterpart in this program. Martin is the main consultant for this project.

### **Impact Evaluation of Smoke-Free Environments (SFE) on Tourism in selected Caribbean Countries, March 2021 - August 2021**

The aim of this project is twofold, first, to develop a methodological proposal to conduct an analysis of the economic impact of SFE on tourism in selected Caribbean countries, including required data sources; second, to conduct an analysis and reporting of the economic impact of SFE on tourism in selected Caribbean countries (barbados, Guyana, Jamaica and Trinidad and Tobago), based on the methodology developed as part of this consultancy. Martin is the consultant for the Pan-American Health Organization (PAHO) for this consultancy. Identification of potential effects of SFE over tourism required to compare the evolution of tourism variables -inbound tourism arrivals, tourism expenditures and average length of stay- in a country that implemented smoke-free environments (SFE) -the “treated” country. with the evolution in the tourism variables in the same country if the smoke-free legislation had not been implemented. Synthetic control methods were used to recreate the counterfactual scenario -what would have happened with tourism if smoke-free legislation had not been implemented- by constructing a “synthetic country” using a weighted average of several control countries that did not introduced SFE legislation during the period analyzed. This synthetic control country is an artificial country that provides a counterfactual scenario that could better represent the pre-legislation trends in absence of SFE. The set of control countries used to construct this synthetic control country is referred as to the donor pool. Selected countries for the donor pool that did not implemented comprehensive smoke-free legislation were from the CARICOM region. The quantification of the effect of the SFE in each year post-implementation was computed as the difference in the tourism variable of the treated country and that of its synthetic country counterfactual. Permutation tests were used to compare the legislation effects in the treated country to “placebo effects” obtained for each country in the donor pool by fictitiously assuming that comprehensive smoke-free legislation was introduced in the same year as the treated country. These placebo tests allow to assess whether the estimated SFE effect is merely the result of chance. To complement this inference procedure, a difference in differences regression analysis combining the SFE impact in the treated country and all the placebo effects were implemented.

### **Impact Evaluation of “Comprehensive Improvement Program of the *General Roca Ramal Plaza Constitución-La Plata* Railway” in Argentina, December 2015 - February 2017**

The aim of this project was to design an impact evaluation methodology to measure the effects of the electrification of *General Roca* railway on several objectives. The impact evaluation methodology included the establishment of a Baseline, the formation of a control group and the implementation of a synthetic control group methodology in order to measure the impacts. Martin acted as Evaluation Expert and he was responsible for the survey design, data collection, baseline analysis, identification of treatment and control groups and determination of outcomes. Emphasis was placed on measuring the following indicators: (i) use of the service, (ii) travel time, (iii) satisfaction with the service, (iv) modal shift, (v) security (burglary). In all cases, retrospective questions were asked to measure

change in these variables in both the treatment group and the pre-identified control group. This project involved power calculations to determine the sample size, matching procedures to select members for both groups and quasi-experimental synthetic control method to evaluate the effects of the program.

#### **Impact Evaluation of “Mi Primer Empleo” in Ecuador, September 2012-December 2013**

The aim of this project was to evaluate the impact of a job-training program called “Mi Primer Empleo” (My First Job) that targets urban youth ages 15-19 who live in conditions of poverty and are currently unemployed. The program is managed by the Secretaría Nacional de Planificación y Desarrollo (SENPLADES) of the Government of Ecuador with funding by the World Bank. Under the impact evaluation contract, ECONOMICA evaluated the impact of the program and Martin served as Evaluation Expert and Technical Director of this project. Martin was responsible for the survey design, data collection, identification of treatment and control groups, and data analysis to evaluate the impact of being a beneficiary of the program on labor outcomes (probability of getting a job, probability of getting a job in the formal sector of the economy, probability of getting a job in the public sector of the economy, time until first employment and labor income). The program did not use a randomization strategy to select beneficiaries. Baseline analysis was performed using the registries of the program for treatment and control (those registered for the program but not selected) groups. This project involved power calculations to determine the sample size, matching procedures to select members for both groups and quasi-experimental methods (simple differences, regression, weighting, blocking, matching, weighting regression, regression with matching and difference-in-differences with matching) to evaluate the impact of the program.

#### **Impact Evaluation Methodology for the program “Mi Primer Empleo” in Ecuador, October 2011 - January 2012**

The aim of this project was to design an impact evaluation methodology of a job-training program called “Mi Primer Empleo” (My First Job) that targets urban youth ages 15-19 who live in conditions of poverty and are currently unemployed. Martin was the project director. The work included the analysis of the administrative records of the program to determine if it was possible to construct treatment and control groups for the impact evaluation and to perform the baseline analysis. This project suggested sample sizes for both groups using power analysis, designed of the questionnaires to be applied to both groups after the program have been finalized, and proposed quasi-experimental methods (simple differences, regression, weighting, blocking, matching, weighting regression, regression with matching and difference-in-differences with matching) to evaluate the impact of the program.

#### **Impact Evaluation and Cost-Benefit Analysis for the program “Entrenamiento para el Empleo (EPEM)” in Honduras, August 2011 - November 2011**

The aim of this project was to evaluate the impact of a job-training program called “Entrenamiento para el Empleo (EPEM)” that target unemployed and underemployed youth ages 18-29 with the object to increase their possibilities of labor insertion. The program is managed by the Secretaría de Trabajo y Seguridad Social (STSS) of Honduras with funding by the International Development Bank (IDB). Martin was the project director and his work included not only the impact evaluation of the program but also its cost/benefit analysis. The evaluation included survey design, data collection, identification of treatment and control groups, and data analysis to evaluate the impact of being a beneficiary of the program on labor outcomes (probability of getting a job in the short and medium run after finishing the program, time until first employment, probability of getting a formal job, and labor income). The program did not use a randomization strategy to select beneficiaries. Baseline analysis was performed using the registries of the program for the treatment group and a random sample from the Servicio Público Privado de Intermediación Laboral (SPPIIL, an employment office for workers with characteristics similar to those in the EPEM), for the control group. Impact evaluation was performed using quasi-experimental methods (simple differences, regression, weighting, blocking, matching, weighting regression, regression with matching and difference-in-differences with matching) and duration analysis. The project included working sessions in San Pedro Sula and

Tegucigalpa with implementing organization, firms where some beneficiaries ended working and officials of the STSS.

#### **Impact Evaluation of “Bono de Desarrollo Humano” in Ecuador, December 2010 - March 2011**

The aim of this project was to evaluate the impact of a conditional cash-transfer program called “Bono de Desarrollo Humano” (BDH, Human Development Bonus) over several labor market outcomes. The program attempts to accomplish a reduction in demand-side income inequality while it establishes, through the incentive of cash transfers to their households, co-responsibilities with poor people to keep their children in school and to regularly visiting health services institutions. The BDH basically consists of a monetary compensation to vulnerable groups such as elderly, disabled and mothers whose families fall below the poverty line. The program is managed by the Ministerio Coordinador de Desarrollo Social of the Government of Ecuador with funding by the World Bank. Martin was the project director and implemented an impact evaluation based on the BDH’s targeting mechanism, a dataset specifically constructed for this project and a regression discontinuity approach (RDD). Main results of the evaluation show that conditional cash transfers increase substantially the duration of unemployment not only of beneficiary’s mothers but also of workers living in households having those transfers. The evidence also suggests a positive cash transfers impact on post-unemployment wages as predicted by the job search theory. The program did not had any distortive effects on the finding probability of an informal job.

#### **Impact Evaluation of the “Modelo Participativo de Gestión” in Argentina, December 2003 - October 2005**

The aim of this project was to evaluate the economic and health effects of a program designed to provide piped water to shantytowns in Greater Buenos Aires called “Modelo Participativo de Gestión” (MPG) with funding by Aguas Argentinas S.A. (the water and sanitation company). Aguas Argentinas launched the program at the beginning of 2002 in order to address the specific problem of water development in shantytowns. A salient characteristic of this program was that beneficiary communities agreed to provide the labor for the execution of the construction works in their neighborhoods. In retribution for this work, Aguas Argentinas did not charge water connection fees to the households in the neighborhood. Once connected, the households were incorporated as clients of Aguas Argentinas and had to pay a bi-monthly service fee of about five pesos (around 1.7 US dollars) per household. Martin was the project director and led the impact of the extension of the water network through this expansion program on the child health status and the water related expenses of these households. The evaluation included survey design, data collection, identification of treatment and control groups, and data analysis to evaluate the impact of the MPG program. Quasi-experimental methods (matching and difference-in-differences with matching) were used to evaluate the impact of this program.

#### **Impact Evaluation of the “Programa Opción Joven” in Uruguay, September 1995 - December 1997**

The Program tested and evaluated a series of strategies, methodologies, and procedures to help young people enter the labor market, either as employees or through the creation of micro- or small enterprises. Through public competition and the submission of bids, NGOs presented projects designed to set up short-term, temporary contracts for youth that had completed the training, with the companies paying the cost of salaries and benefits while the Program covered selection and support expenses. The Inter-American Development Bank and the Instituto Nacional de la Juventud (National Institute of the Youth) signed an impact evaluation contract (ATN MH - 4525 UR Opción Joven) and Martin served as the Evaluation Expert and Technical Director of this project. Martin was in charge in 1995 of the methodology proposal to evaluate this program and after that in 1996-1997 was responsible for the survey design, data collection, identification of treatment and control groups, and data analysis to evaluate the impact of being a beneficiary of the program on labor outcomes (probability of getting a job and labor income).

## CONSULTANCY: OTHER

*World Bank* **August 2018 - August 2019**  
Consultant for the project “Impact Evaluation of Integrated Fare System for the Greater Buenos Aires.”

*IDB (Inter-American Development Bank)* **September 2015 - June 2016**  
“Apoyo a mercados laborales y seguridad social en Argentina y Surinam.” IDBDOCS 39779683

*Millennium Challenge Corporation (MCC)* **April-May & September-December 2014**  
Peer reviewer for the “Design of the Evaluation of Millennium Challenge Account (MCA) Namibia’s Conservancy Support (CS) and Indigenous Natural Products Activities (INP) and for the “Final Evaluation of the Namibia Compact’s Conservancy Support and Indigenous Natural Products Activities.”

*Inter-American Hearth Foundation (IAHF)* **October 2012 - Present**  
Consultant for the project “From Production To Retailing: Policy-Oriented Research On Tobacco Economy In Argentina.”

*International Development Research Centre (IDRC)* **October 2012 - December 2013**  
Consultant for the project “Tobacco Taxes and Tobacco Control Policies in Brazil, Mexico and Uruguay.”

*World Bank* **December 2011 - Present**  
Consultant for the project “Do the Poor Face Higher Prices in Pharmacies? A Proposed Mystery Client Experiment in Argentina.”

*United Nations Populations Fund (UNFPA)* **August 2011 - December 2011**  
Consultant for the project “Quantitative Relationship between Family Planning and Maternal Health in Ecuador.”

*United Nations Populations Fund (UNFPA)* **July 2009 - December 2009**  
Relationships between adolescent pregnancy and poverty in Ecuador. Project director.

*Ministerio de Salud y Ambiente de la Nación* **2003 - 2010**  
Consultant for the VIGIA Program.

*Ministerio de Trabajo, Empleo y Seguridad Social (MTSS)* **2004 - 2007**  
Consultant for the Subsecretaría de Programación Técnica y Estudios Laborales in support of a contract with the Organización Internacional del Trabajo (OIT).

*World Health Organization (WHO)* **January 2003 - July 2005**  
Consultant for the project: Tobacco control policies in MERCOSUR countries.

*United Nations* **2003 - 2004**  
Consultant for the PNUD. Contracts: 5276/2003, 1015/2004 and 2456/2004.

*Instituto Nacional de Estadística y Censos (INDEC)* **2001 - 2002**  
Consultant for the Dirección de Metodología Estadística.

*Secretaría de la Pequeña y Mediana Empresa (SEPYME)* **March - October, 2000**  
Consultant for the Programa Global de Crédito a la Micro y Pequeña Empresa. Contract No. 1192/OC-AR, IADB.

*Banco de la Provincia de Buenos Aires* **February - December, 2000**  
Consultant for the Bank's Directory.

*SIDERAR* **June - July, 2000**  
Consultant for the Comisión Nacional de Comercio Exterior.

*ECLAC (Buenos Aires' Office)* **March 1999 - March 2000**  
Consultant for the estimation of the regional GDP of Buenos Aires.

*Coopers & Lybrand L.L.P. - U.S. Agency for International Development* **January - May, 1995**  
Consultant for the project "Maternity Leave Legislation and the Work and Pay of Women in Costa Rica".

## RESEARCH STUDIES

*IDB (Inter-American Development Bank)* **September 2019 - September 2021**  
"Labor Share and Inequality in Latin America and the Caribbean" RG-K1198
